

We claim:

1. A pulp packing material comprising:
a first layer containing crosslinked pulp as a main component;
and
a second layer containing a non-crosslinked material.
2. A pulp packing material according to Claim 1, wherein said second layer contains pulp or biodegradable plastics as a main component.
3. The pulp packing material according to Claim 1, wherein at least one surface of said packing material is covered with a film of plastics.
4. The pulp packing material according to Claim 2, wherein at least one surface of said packing material is covered with a film of plastics.
5. A pulp packing material comprising:
a sheet containing non-crosslinked pulp as a main component;
and
a film of plastics that covers at least one surface of said sheet.
6. A method for producing a pulp packing material, comprising the steps of:
performing sheet-making to produce a first layer containing

crosslinked pulp as a main component;

performing sheet-making to produce a second layer containing a non-crosslinked material as a main component; and

sticking said first and second layers to each other.

7. The method for producing a pulp packing material according to Claim 5, wherein:

said first layer is produced in a first mold;

said second layer is produced in a second mold; and

said first and second layers are cramped between said first and second molds and then stuck to each other.

8. The method for producing a pulp packing material according to Claim 5, further comprising the step of performing press molding after sticking said first and second layers to each other.

9. A method for producing a pulp packing material, comprising the steps of:

covering at least one surface of a sheet containing non-crosslinked pulp as a main component, with a film of plastics; and then,

heating said sheet.
